

ZARODEK: embrio vs. fetus/foetus

https://www.medicinenet.com/embryo_vs_fetus_differences_week-by-week/article.htm

The terms embryo and fetus both refer to the developing baby inside the mother's womb (uterus).

The distinction between embryo and fetus is made based on gestational age.

An **embryo** is the early stage of human development in which organs and critical body structures are formed. An embryo is termed a **fetus** beginning in the 11th week of pregnancy, which is the 9th week of development after fertilization of the egg.
